Lecture 9

(Complex) Sequences and Series

(数列と級数)

What you will learn in Lecture 9

9.1 (Complex) Sequences and Series (数列と級数)

9.2 Testing Series

Cauchy's integral formula for derivatives indicates that if a function f is analytic at a point z_0, **then it possesses derivatives of all orders at that point**.

As a consequence of this result we shall see that f can always be expanded in **a power series** centered at that point.

On the other hand, if f fails to be analytic at z_0, we may still be able to expand it in a different kind of series known as a **Laurent series**.

9.1 (Complex) Sequences and Series

(数列と級数)

Sequences (数列)

A **sequence** $\{z_n\}$, where $n = 1, 2, 3, \ldots$, is a function whose domain is the set of positive integers and whose range is a subset of the complex numbers $\mathbf{C}$.

For example, the sequence $\{1 + i^n\}$ is

$$\begin{array}{cccccc} 1+i, & 0, & 1-i, & 2, & 1+i, & \ldots \\ \uparrow & \uparrow & \uparrow & \uparrow & \uparrow & \\ n=1, & n=2, & n=3, & n=4, & n=5, & \end{array} \tag{6.1.1}$$

9.1 (Complex) Sequences and Series (数列と級数)

Sequences (数列)

If $\lim_{n\to\infty} z_n = L$, we say the sequence $\{z_n\}$ is **convergent (収束).**

Sequence that is not convergent is said to be **divergent (発散).**

$\{z_n\}$ converges to the number L, if for each positive real number ε, an N can be found such that $|z_n - L| < \varepsilon$ whenever $n > N$. Since $|z_n - L|$ is distance, the terms z_n of a sequence that converges to L can be made arbitrarily close to L.

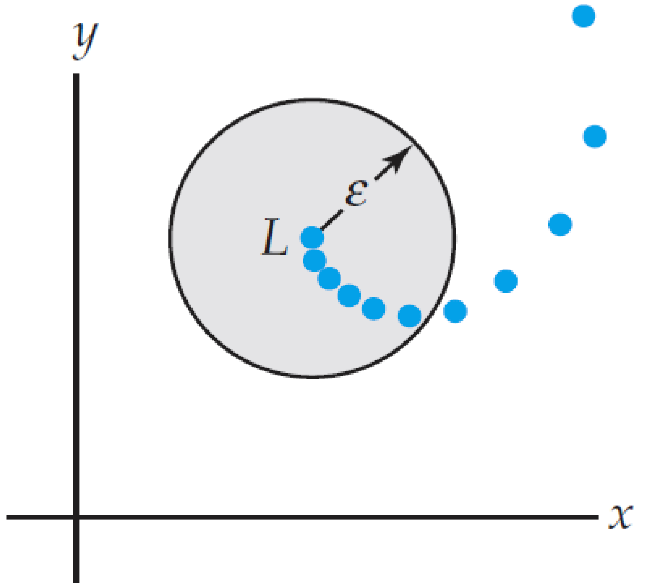

Figure 6.1 If $\{z_n\}$ converges to L, all but a finite number of terms are in every ε–neighborhood of L.

Sequences (数列)

For example, the sequence $\{1+i^n\}$

$$\begin{array}{cccccc} 1+i, & 0, & 1-i, & 2, & 1+i, & \ldots \\ \uparrow & \uparrow & \uparrow & \uparrow & \uparrow & \\ n=1, & n=2, & n=3, & n=4, & n=5, & \end{array}$$

The sequence $\{1+i^n\}$ **is divergent** because **the general term** $z_n = 1+i^n$ **does not approach a fixed complex number** as $n \to \infty$.

EXAMPLE (例題) 6.1.1 A Convergent Sequence

The sequence $\left\{\frac{i^{n+1}}{n}\right\}$ converges or not.

Solution (解答):

Hint:

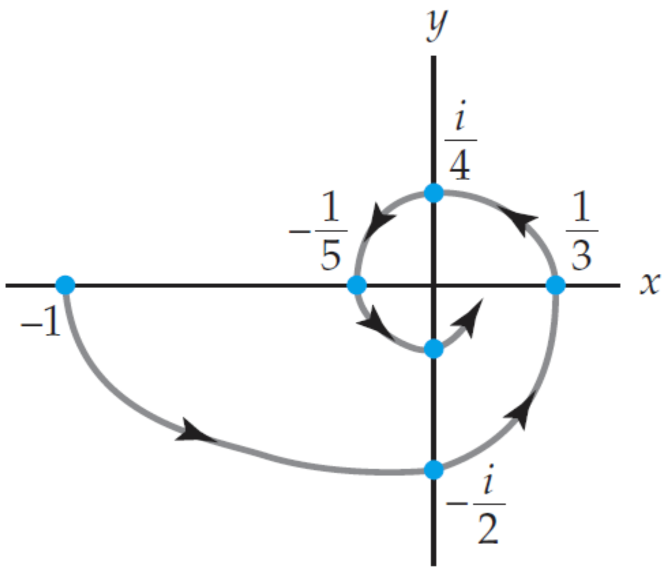

Figure 6.2 The terms of the sequence $\{\frac{i^{n+1}}{n}\}$ spiral in toward 0.

Sequences (数列)

Theorem 6.1 Criterion (基準) for Sequence Convergence

Suppose that $z_n = x_n + iy_n$ $(n = 1, 2, \ldots)$ and $L = x + iy$. Then

$$\lim_{n\to\infty} z_n = L$$

if and only if

$$\lim_{n\to\infty} x_n = x \quad \text{and} \quad \lim_{n\to\infty} y_n = y$$

This theorem for sequences is the analogue of Theorem 2.1 in Lecture 2.

Theorem 2.1 Real and Imaginary Parts (実部と虚部) of a Limit

Suppose that $f(z) = u(x, y) + iv(x, y)$ and $z_0 = x_0 + iy_0$, and

$L = u_0 + iv_0$. Then $\lim_{z\to z_0} f(z) = L$ **if and only if**

$$\lim_{(x,y)\to(x_0,y_0)} u(x, y) = u_0 \text{ and } \lim_{(x,y)\to(x_0,y_0)} v(x, y) = v_0$$

Additional EXAMPLE (例題) Using Theorem 6.1

The sequence $\left\{\frac{1}{n^3} + i\right\}$ converges or not.

Solution (解答):

Hint:

- Theorem 6.1

The Lecture Slides with complete solution will be uploaded with Assignment sheet after the class.

Check https://github.com/uoaworks/ComplexAnalysisAY2018

EXAMPLE (例題) 6.1.2 Using Theorem 6.1

The sequence $\left\{\frac{3+ni}{n+2ni}\right\}$ converges or not.

Solution (解答):

Hint:

- Theorem 6.1

The Lecture Slides with complete solution will be uploaded with Assignment sheet after the class.

9.1 (Complex) Sequences and Series (数列と級数)

Series (級数)

An infinite series or series of complex numbers

$$\sum_{k=1}^{\infty} z_k = z_1 + z_2 + z_3 + \cdots + z_n + \cdots$$

is convergent if the sequence of **partial sums** $\{S_n\}$, where

$$S_n = z_1 + z_2 + z_3 + \cdots + z_n$$

converges.

If $S_n \to L$ as $n \to \infty$, we say that **the series converges to** L or that **the sum of the series** is L.

Additional Theorem: Criterion (基準) for Series Convergence

Suppose that $z_k = x_k + iy_k$ $(k = 1, 2, \ldots)$ and $S = X + iY$. Then

$$\sum_{k=1}^{\infty} z_k = S$$

if and only if

$$\sum_{k=1}^{\infty} x_k = X \quad \text{and} \quad \sum_{k=1}^{\infty} y_k = Y$$

Additional EXAMPLE (例題) **Using the Additional Theorem**

Show that if $\sum_{k=1}^{\infty} z_k = S$, then $\sum_{k=1}^{\infty} \overline{z_k} = \overline{S}$.

Solution (解答):

Hint:

- Additional Theorem

The Lecture Slides with complete solution will be uploaded with Assignment sheet after the class.

Geometric Series (幾何級数)

A **geometric series** is any series of the form

$$\sum_{k=1}^{\infty} az^{k-1} = a + az + az^2 + \cdots + az^{n-1} + \cdots \qquad (6.1.2)$$

For (6.1.2), the nth term of the sequence of partial sums is

$$S_n = a + az + az^2 + \cdots + az^{n-1} \qquad (6.1.3)$$

Geometric Series (幾何級数)

When an infinite series is a geometric series, it is always possible to find a formula for S_n.

Why? We can multiply S_n in (6.1.3) by z,

$$zS_n = az + az^2 + az^3 + \cdots + az^n$$

and subtract this result from S_n, then we have

$$S_n - zS_n = (a + az + az^2 + \cdots + az^{n-1}) - (az + az^2 + az^3 + \cdots + az^n)$$

$$= a - az^n$$

$$\Rightarrow \quad S_n = \frac{a(1 - z^n)}{1 - z} \tag{6.1.4}$$

Now $z^n \to 0$ as $n \to \infty$ whenever $|z| < 1$, and so $S_n \to \frac{a}{1-z}$.

In other words, for $|z| < 1$ the sum of a geometric series (6.1.2) is $\frac{a}{1-z}$:

$$\frac{a}{1 - z} = a + az + az^2 + \cdots + az^{n-1} + \cdots \tag{6.1.5}$$

A geometric series (6.1.2) diverges when $|z| \geq 1$.

Special Geometric Series

If we set $a = 1$, the equality in (6.1.5) is

$$\frac{1}{1-z} = 1 + z + z^2 + z^3 + \cdots \tag{6.1.6}$$

If we then replace the symbol z by $-z$ in (6.1.6), we get a similar result

$$\frac{1}{1+z} = 1 - z + z^2 - z^3 + \cdots \tag{6.1.7}$$

Like (6.1.5), the equality in (6.1.7) is valid for $|z| < 1$ since $|-z| = |z|$.
Now with $a = 1$, (6.1.4) gives us the sum of the first n terms of the series in (6.1.6):

$$\frac{1-z^n}{1-z} = 1 + z + z^2 + z^3 + \cdots + z^{n-1}$$

EXAMPLE (例題) 6.1.3 Convergent Geometric Series

The series $\sum_{k=1}^{\infty} \frac{(1+2i)^k}{5^k}$ is convergent or divergent?

Solution (解答):

The Lecture Slides with complete solution will be uploaded with Assignment sheet after the class.

Check https://github.com/uoaworks/ComplexAnalysisAY2018

p-series

In elementary calculus a real series of the form $\sum_{k=1}^{\infty} \frac{1}{k^p}$ is called a p-series and converges for $p > 1$ and diverges for $p \leq 1$.

Theorem 6.2 A Necessary Condition for Convergence

If $\sum_{k=1}^{\infty} z_k$ converges, then $\lim_{n\to\infty} z_n = 0$.

Proof

The Lecture Slides with complete proof will be uploaded with Assignment sheet after the class.

Check https://github.com/uoaworks/ComplexAnalysisAY2018

9.2 Testing Series

A Test for Divergence

Theorem 6.3 The nth Term Test for Divergence

If $\lim_{n\to\infty} z_n \neq 0$, then $\sum_{k=1}^{\infty} z_k$ diverges.

For example,

the series $\sum_{k=1}^{\infty} \frac{ik+5}{k}$ **diverges** since $z_n = \frac{in+5}{n} \to i \neq 0$ as $n \to \infty$.

The geometric series (6.1.2) **diverges** if $|z| \geq 1$ because even in the case when $\lim_{n\to\infty} |z^n|$ exists, **the limit is not zero**.

Definition 6.1 Absolute and Conditional Convergence (絶対収束と条件収束)

An infinite series $\sum_{k=1}^{\infty} z_k$ is said to be **absolutely convergent** if $\sum_{k=1}^{\infty}|z_k|$ converges. An infinite series $\sum_{k=1}^{\infty} z_k$ is said to be **conditionally convergent** if it converges but $\sum_{k=1}^{\infty}|z_k|$ diverges.

EXAMPLE (例題) 6.1.4 Absolute Convergence

The series $\sum_{k=1}^{\infty} \frac{i^k}{k^2}$ is absolute convergent or not.

Solution (解答):

Hint:

- Definition 6.1

The Lecture Slides with complete solution will be uploaded with Assignment sheet after the class.

Check https://github.com/uoaworks/ComplexAnalysisAY2018

As in Real-value calculus:

Absolute convergence implies convergence.

We can therefore conclude that the series in Example 6.1.4,

$$\sum_{k=1}^{\infty} \frac{i^k}{k^2} = i - \frac{1}{2^2} - \frac{i}{3^2} + \frac{1}{4^2} + \cdots$$

converges because it is absolutely convergent.

Tests for Convergence

Theorem 6.4 Ratio Test

Suppose is a series of nonzero complex terms such that

$$\lim_{n\to\infty}\left|\frac{z_{n+1}}{z_n}\right| = L \tag{6.1.9}$$

(i) If $L < 1$, then the series converges absolutely.

(ii) If $L > 1$ or $L = \infty$, then the series diverges.

(iii) If $L = 1$, the test is inconclusive.

Tests for Convergence

Theorem 6.5 Root Test

Suppose is a series of complex terms such that

$$\lim_{n\to\infty} \sqrt[n]{|z_n|} = L \tag{6.1.10}$$

(i) If $L < 1$, then **the series converges absolutely**.

(ii) If $L > 1$ or $L = \infty$, then **the series diverges**.

(iii) If $L = 1$, **the test is inconclusive**.
